# Image Slider and Cards

Web Development

Time: 60 mins

### Introduction

In this class, the student/s will learn to create a slideshow of images using CSS. Student/s will also change the layout of the events section into a card display and highlight the card as the mouse hovers over it using a pseudo class selector.

## HTML Tags & CSS Properties Introduced

animation: name duration repeat
Styles the HTML elements which are to be animated. "name"

represents the animation name, "duration" specifies the duration in which animation completes one full cycle, "repeat"

represents the number of times animation is played.

@keyframes
Defines an animation sequence. Each keyframe represents

how an animated element changes at a given time during the

animation sequence.

## Vocabulary

• Slideshow is a set of images traversed one after another..

## Learning Objectives

Student/s should be able to:

- Recall how to style tags using pseudo id and class selectors.
- Explain how to create a slideshow of images.
- Explain how to create and style a card display.
- Demonstrate how to create an animation of images using the animation property and style the events section as a card display.

### **Activities**

- 1. Class Narrative: (2 mins)
  - Brief the student/s that adding visual effects on a website keeps the visitors hooked longer and makes the websites more engaging.
- 2. Concept Introduction Activity: (5 mins)
  - Let the student/s play the explore-activity and observe that the banner images keep changing and the upcoming events are organized as cards.

- Using the slides, explain how:
  - to create a slideshow of images
  - o to display the upcoming events section as cards
  - to add a hover effect to event cards

#### 3. Activity 1: Create a Slideshow: (12 mins)

#### **Teacher Activity**: (6 mins)

- Highlight to the student/s that the slideshow in the banner section of the school website is a set of images displayed one after the other.
- Explain to the student/s how to create an animation using the animation property of CSS and define an animation sequence using @keyframes.
- Explain how to set the time in percentage of total animation duration at which each keyframe with a specified style is displayed.

#### **Student Activity:** (6 mins)

 Guide the student/s to create a slideshow of images for the banner section of the school website.

#### 4. Activity 2: Style the Events Section: (10 mins)

#### Student Activity: (10 mins)

- Highlight to the student/s that each event detail is placed on a card arranged horizontally which makes it more easily readable.
- Guide the student/s to align and style the events section as a card display.

Probing question: What property can be used to align the text?

Expected answer: text-align

#### 5. Activity 3: Style the Event Cards: (10 mins)

#### **Student Activity:** (10 mins)

• Guide the student/s to add CSS properties to highlight the card of the event when the mouse hovers over it.

#### 6. Introduce the Post class project: (2 min)

• Style the Top Attractions section of the zoo's website to display them with a better layout.

#### 7. Test and Summarize the class learnings: (5 mins)

- Check for understanding through quizzes and summarize learning after respective missions.
- Summarize the overall class learning towards the end of the class.

#### 8. Additional activities:

- Encourage the student/s to add styling to the event badges placed in event cards.
- Encourage the student/s to add animation effects for the school highlights section.

#### 9. State the Next Class Objective: (1 min)

• We will learn to debug a pizza website.
